

[Configure The VPN Service In MacOS Server 5.4 On High Sierra](#)

A screenshot of the macOS Server application's VPN configuration window. On the left is a sidebar with a tree view of system services: Server (odr, Alerts, Certificates, Logs, Stats), Accounts (Users, Groups), Services (Caching, Calendar, Contacts, File Sharing, Mail, Messages, Profile Manager, Time Machine, VPN, Websites, Wiki, Xcode), and Advanced (DHCP, DNS, FTP, NetInstall, Open Directory, Xsan). The VPN service is selected and highlighted. The main pane shows the VPN configuration for a service named "VPN". At the top right is a toggle switch labeled "OFF". The status is "Offline - Turn on service to let users connect to your network over the Internet". Permissions are set to "All users, All Networks". The VPN Host Name is "odr.krypted.com". The Shared Secret is masked with dots. Client Addresses are "4 for L2TP". DNS Settings are "3 name servers, 1 domain". Routes are "No routes configured". The Configuration Profile is "Save Profile...".
